

INTERACTIVE VISUAL GYM / FIGURE PROOF

Environment showcase / consecutive executable actions | 5.5-inch manuscript width

Procedural tasks in three visual environments. Large top-down views establish spatial context. Each row shows four consecutive actions, an omitted interval, and a final task action. Captions use engine action vocabulary. Phone views retain the upper or lower half containing the active control, with a full-screen locator at left. Touch and swipe markers are illustrative overlays on unretouched observations.

This proof places the figure at the manuscript text width, followed by a 10-point caption. Screenshot details do not replace readable vector labels. The publication PDF preserves text and geometry as vectors; only simulator observations are raster images.

INTERACTIVE VISUAL GYM / FIGURE PROOF

Two assistant responses / trust in AI | 5.5-inch manuscript width

Illustrative episode branches for the same wrong-ingredient event. Assistant A intervenes before the irreversible addition; B responds afterward. Two users with different trust in AI respond differently to B: one accepts guidance, while the other asks the assistant to verify its assessment. Frames are engine-rendered; dialogue is authored, not measured model output. Timeline distances are schematic. Recovery excerpts show emptying the plate, not task completion.

This proof places the figure at the manuscript text width, followed by a 10-point caption. Screenshot details do not replace readable vector labels. The publication PDF preserves text and geometry as vectors; only simulator observations are raster images.
