

INTERACTIVE VISUAL GYM / FIGURE PROOF

Environment showcase / expanded observation strips | 5.5-inch manuscript width

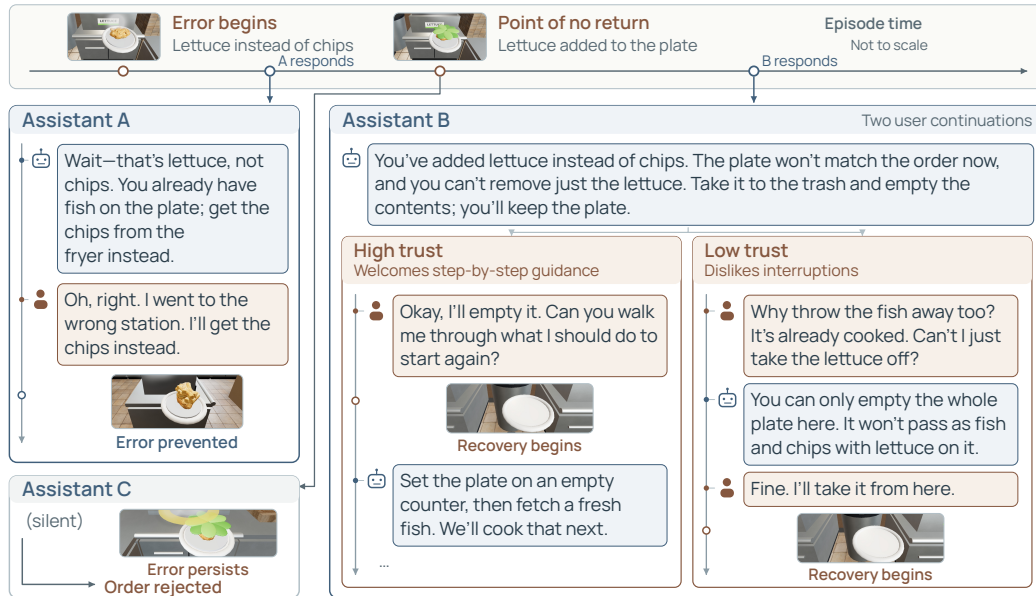

Procedural tasks in three environments, with sampled user-view observations. Top-down maps provide context and are not execution steps. Ellipses omit intermediate actions. The phone row retains complete screens; hand and drag annotations illustrate simulator gestures.

This proof places the figure at the manuscript text width, followed by a 10-point caption. Screenshot details do not replace readable vector labels. The publication PDF preserves text and geometry as vectors; only simulator observations are raster images.

INTERACTIVE VISUAL GYM / FIGURE PROOF

Interaction episodes / error-event timelines | 5.5-inch manuscript width

Illustrative episode branches for the same wrong-ingredient event. Assistant A intervenes before the irreversible addition; B responds afterward, prompting two persona-dependent continuations; C remains silent. Follow the shared event timeline, then read downward within each episode. Timeline spacing is schematic, not measured latency. Frames are engine-rendered; dialogue is authored, not measured model output. Recovery excerpts show emptying the plate, not task completion.

This proof places the figure at the manuscript text width, followed by a 10-point caption. Screenshot details do not replace readable vector labels. The publication PDF preserves text and geometry as vectors; only simulator observations are raster images.
